OPERAS is a European research infrastructure for the development of open scholarly communication, particularly in the social sciences and humanities.

OPERAS-D (design project) addresses the long-term requirements for OPERAS.

As a key objective, the OPERAS-D project has prepared a design study that defines governance models, scientific and technical concepts for future services that the infrastructure will provide, and has established a roadmap to achieve these goals according to the requirements for long term sustainability.

Because scholarly communication is at the heart of a researcher’s activity ...

... and the field is highly fragmented ...

... it needs to be integrated into the European Open Science Cloud.
